What Sets Us Apart

is not just technology but context. Our solutions are designed specifically for:

Saudi regulatory frameworks

Local and cross-border investor onboarding

Institutional governance and audit readiness

Arabic-first and bilingual experiences

Trusted AI for Saudi Finance

DigiTrends brings to Saudi Arabia a rare combination of global financial technology experience and deep local market engagement. The company's capabilities have been shaped through deployments with U.S. financial institutions, environments where scale, compliance, and precision are non-negotiables.

Building on these experiences, DigiTrends has translated proven technological frameworks into the Saudi market, positioning itself among the few firms whose systems are actively supporting the Kingdom's evolving wealth and asset management ecosystem.

With more than five years of collaboration with leading asset management firms in Saudi Arabia, DigiTrends has developed strong expertise in the sector's regulatory landscape and investor expectations. This combination of global execution experience and local intuition allows the firm to deploy production-ready platforms that are already delivering considerable results in major financial institutions.

About Our CEO

Samad Saleem, CEO of DigiTrends, is a technology leader with over a decade of experience driving innovation in AI, fintech, healthcare, AR, and VR. Under his leadership, DigiTrends has expanded globally across the U.S., Middle East, and Europe, helping digitally transform countless brands.

He is also a member of the Technical Exchange Network (TEN) within the Artificial Intelligence Infrastructure Interchange (AIII) by World Intellectual Property Organization, a specialised UN agency, as well as a member of the ICC committee, reflecting his active role in shaping the future of AI infrastructure globally.

Meet The Team

AI Centre of Excellence

In the era of AI, where strategic adoption defines the competitive edge for Saudi financial institutions, it is clear that AI is no longer optional. Yet many leaders remain uncertain about how to adopt it effectively.

Our AI Centre of Excellence (CoE) is a consulting-led solution that helps organizations discover, validate, and scale AI initiatives in a structured and measurable way. It is designed to give leadership and teams confidence in AI adoption, from concept to production.

How It Works

01

Consultancy Workshops

Leadership and department teams collaborate to identify opportunity areas and prioritize high-value AI use cases

02

AI Sandbox

Use cases are implemented in a controlled environment using internal data, allowing clients to test AI solutions and validate practical impact before scaling

03

Production Rollout

Successful use cases move into live production, ensuring measurable outcomes and operational integration

Benefits for Organizations

Clarifies AI opportunities aligned with business goals

Demonstrates tangible value to leadership and stakeholders

Reduces risk by testing solutions before full deployment

Accelerates digital transformation while maintaining control and governance

With the **AI Centre of Excellence**, DigiTrends enables Saudi organizations to move from uncertainty to action, supporting **Saudi Vision 2030's** ambition for data-driven growth and innovation in line with SDAIA principles.

AI Products

AI products designed to help financial institutions reduce manual effort, improve decision-making, and enhance investor experience.

Client
Experience AI

Operations
& Compliance AI

Finance AI

Client Experience **AI**

AI solutions designed to elevate investor engagement and deliver personalized financial experiences.

By combining personalization, proactive insights, and secure integrations with core investment systems, these solutions strengthen investor confidence while reducing operational friction for financial institutions.

01. Bayan

An intelligent concierge agent for investor guidance.

- ⚡ Instant responses on NAVs, performance, mandates, fees, subscription/redemption processes, and documentation
- 📄 Auto-extracts details from unstructured input with contextual help for complex terms
- 💬 Interact via voice, text, or typing
- 📱 Deployable across websites, mobile apps, and WhatsApp

02. Thimar

A proactive portfolio assistant for personalized investor intelligence.

A generative AI-powered client assistant that provides clear, portfolio-specific insights through natural language conversations.

- 🌐 Personalized answers to complex portfolio questions
- 🔔 Proactive alerts on portfolio performance shifts
- ☁️ Hybrid architecture with an on-premises Secure Vault for all client PII and raw data
- 🔒 Only anonymized JSON payloads shared with the AI layer
- 🏠 Hosted LLM interprets anonymized data with market context
- 🔒 Privacy-first design that builds client trust
- 🔗 Integrations with TradeX / APX, DirectFN, and Bloomberg

Operations & Compliance AI

AI agents built to strengthen governance, automate operations, and support regulatory adherence. By reducing manual interpretation and improving decision speed, these solutions help institutions operate efficiently while maintaining full regulatory alignment.

01. OpsGuard

A compliance agent for secure and compliant operations.

A secure generative AI assistant trained on CMA and NCA regulations to support AMCs' regulatory adherence.

-  Instant, contextual answers to regulatory queries across departments
-  Reduces manual interpretation and accelerates decision-making
-  All data remains within the organization
-  Strengthens compliance while improving operational efficiency

02. Dalil

An AI agent designed to improve employee experience.

A generative AI-powered internal assistant for AMC teams, delivering accurate and role-based guidance.

-  Instant access to company policies, SOPs, and departmental processes
-  Reduces manual document searches and internal back-and-forth
-  Conversations and data remain within the organization
-  Improves onboarding, knowledge access, and the overall employee experience.

03. Mizar

An agentic AI solution for fund valuation and NAV calculation.

An agentic AI-driven fund valuation and NAV calculation agent.

Ingests fund definitions and parameters from Excel or core systems

Automated asset-class-specific valuation, including market price verification for equities

Processes subscriptions, redemptions, and expense postings automatically

Applies real-time FX rates and identifies units across investor classes accurately

Automates the full NAV calculation cycle with validation, reconciliation, and audit-ready outputs

04. DigiSights

Private AI for institutional knowledge

With Arabic and English support, it transforms SharePoint into an intelligent workspace, enabling teams to search, summarize, and securely extract insights.

Private AI deployed on-premise or private cloud

Document-based answers with citations

Arabic and English language support

Workflow automation across enterprise knowledge tasks

Integration with SharePoint and internal systems

Finance AI

Digital platforms designed to support the full investment lifecycle, from onboarding and investment through distribution, monitoring, and compliance.

AUTOMATE
•
CONTROL
•
SCALE

01. Rageem

An AI agent for accounts payable validation and control.

An agentic AI solution for accounts payable validation, compliance, and operational visibility.

Autonomous extraction from Oracle portals and Microsoft Graph email streams

Checks ZATCA compliance and internal rules

Automates internal loops and external vendor communications

Detects bottlenecks and routes tasks automatically to owners

Real-time dashboards track AP health and financial liabilities, ensuring audit-ready transparency

02. Mudabbir

Smart invoice agent that automates billing, approvals, and payments

An agentic AI agent that automates fee capture, billing, and invoice lifecycle management.

Automatically extracts management and performance fees from Geneva or internal systems

Automates invoice creation, PM approval routing, and structured dispatch to clients

Monitors payments in real time and ensures audit-ready visibility

Applies client-specific instructions for payments

Integrates approved invoices into Oracle Fusion or other internal accounting systems for financial integrity

Agentic AI Processes

Implemented Across Leading
KSA Financial Institutions

01.

Market & Portfolio Data Matching

AI automatically compares cash and investment records across internal and external systems, identifies differences, and drives them through resolution.

02.

Internal Trade Processing

AI manages the end-to-end trade workflow from file collection and transaction matching to system posting, settlement instructions, and operational reporting.

03.

Multi-Broker Trade Processing

AI consolidates trades received from multiple brokerage partners, validates transactions, updates internal platforms, and coordinates downstream settlement activities.

Reconciliation & Position Controls

04.

Cash Position Verification

AI compares cash balances across internal records, banks, and custody sources to automatically detect and report financial discrepancies.

05.

Investment Position Verification

AI validates securities and portfolio positions across internal and external records and highlights unmatched quantities, values, or instruments.

06.

Multi-Source Cash Matching

AI brings together transactions and balances from banks, custodians, and internal platforms to identify missing entries, currency differences, and balance mismatches.

Reporting & Decision Intelligence

07.

Regulatory Reporting Automation

AI extracts required business data, validates it, and prepares periodic regulatory reports in predefined submission formats.

08.

Conversational Data Intelligence

An AI interface allows authorized users to ask business questions in natural language and retrieve consolidated insights from multiple financial systems.

09.

End-of-Day Reporting Automation

AI validates daily operational reports against predefined rules and automatically distributes approved outputs to relevant external parties.

Valuation & Portfolio Assurance

10.

Portfolio Holdings Validation

AI compares investment positions from internal platforms against external custody records and produces exception reports for operational review.

11.

Automated Fund Pricing Processing

AI retrieves daily pricing and NAV information from external sources, prepares it for portfolio systems, processes updates, and validates the resulting valuations.

Fintech Products

Digital platforms designed to support the full investment lifecycle, from onboarding and investment through distribution, monitoring, and compliance.

InvestSphere

DocuNet

InvestSphere

A comprehensive investor experience platform

InvestSphere is a unified digital investment ecosystem designed to enhance investor experience and streamline asset management operations by allowing institutions to deliver secure onboarding, access portfolios in real time, execute fund transactions, manage liquidity, and regulatory workflows through web and mobile channels.

Built on Microsoft .NET Core and secure APIs, the platform supports modular deployment, seamless third-party integrations, and both on-premises and cloud environments.

Core Modules:

01	Digital Account Opening	06	Fund Marketplace
02	Relationship Manager Assisted Onboarding	07	Private Funds Capital Raising
03	Back Office Approval and AML Workflows	08	Cash Management System
04	KYC Lifecycle Management	09	Administrative Control Layer
05	Omnichannel Client Portal	10	Customer Insight Central

1. Digital Account Opening

A fully paperless onboarding journey for individual & corporate investors aligned with Saudi regulatory frameworks.

Key capabilities

-  Integration with Nafath for individual identity verification
-  Integration with Wathq to pre-fill fields for easy data population
-  IBAN validation through Lean
-  Retail, Qualified, and Institutional investor classification.
-  FATCA and CRS compliance capture
-  Secure document upload and digital signatures
-  Real-time application status tracking
-  Reopen and resubmission workflows
-  Complete backend approval process
-  Client classifications covering KSA (Nationals & Residents), GCC (Nationals & Residents), and International investors

02.

Relationship Manager Assisted Onboarding

A structured interface for Relationship Managers to onboard individual and corporate clients with automated data validation, compliance checks, and lifecycle tracking from draft to approval.

Core Modules:

Capture and validate client information for individuals and corporates

Support for Retail and Qualified client classification

Integration with Nafath for individual identity verification

Capture of investment portfolio and risk profiling information

Integration with Wathq for corporate verification

FATCA and CRS compliance capture

IBAN validation through Lean

Secure document upload handling

Application lifecycle management covering draft, submission, and resubmission based on compliance feedback

Client classifications covering KSA (Nationals & Residents), GCC (Nationals & Residents), and International investors

03.

Back Office Approval and AML Workflows

A role-based approval workflow covering Wealth, Compliance, CEO approvals where required, and Operations.

Key capabilities

-  AML screening via Mozn Focal or DAL API
-  Conditional escalation for high risk clients
-  Structured approval and rejection flows
-  Commenting and document uploads at every stage
-  Automated client notifications
-  Full audit visibility
-  Separate workflow for PEP clients with executive approval

4.

KYC Lifecycle Management

The fastest digital KYC update framework for individuals and corporates with pre-filled forms and expiry notifications.

-  Two-factor authentication
-  Nafath and Wathq validation
-  Automated AML screening
-  Step-based approval flows
-  Real-time progress tracking
-  Transparent approval and resubmission handling

5. Omnichannel Client Portal

A secure web and mobile platform providing end-to-end investment lifecycle coverage.

Key capabilities

-  Fund subscription for open-ended & private funds
-  Digital document acceptance & signature
-  Automatic VAT and fee calculation
-  Suitability report generation
-  Partial or full redemption

-  Real-time transaction history
-  Portfolio allocation and performance visibility
-  Internal and external transfers with IBAN verification
-  Cash top up through payment gateway
-  Virtual IBAN for deposits

6. Fund Marketplace

A digital marketplace enabling investors to buy and sell units of closed-ended funds within a structured and compliant framework.

Key capabilities

-  Investor classification validation
-  Suitability engine integration
-  Role-based verification before publishing orders
-  System based matching of buy and sell requests
-  Integration with fund registry applications
-  Real-time order status tracking

7. Private Funds Capital Raising

A digital IPO module supporting closed-ended fund launches.

Key capabilities

-  Guided subscription requests
-  Digital signing of agreements and NDAs
-  Pro rata allocation logic
-  Real-time subscription status visibility
-  Administrative control over fund setup and currency configuration
-  IPO performance reporting

8. Cash Management System

A secure investor cash account framework integrated with onboarding and trading modules.

Key capabilities

-  Multi-currency cash accounts
-  Real-time balance tracking including available and blocked funds
-  Cash reservation for subscriptions and trades
-  Automated release upon settlement or cancellation
-  Deposits via virtual IBANs and payment gateways
-  Withdrawal approvals with two-factor authentication
-  Daily reporting and reconciliation

9. Administrative Control Layer

A centralized operational panel providing full oversight across funds, subscriptions, transfers, and marketplace activities.

Key capabilities

-  Fund creation and document configuration
-  Subscription allocation management
-  Buy and sell order approvals
-  Transfer and withdrawal validation
-  Structured reporting and audit readiness

10. Customer Insight Central

A centralized client data and compliance solution that provides a single source of truth while supporting Saudi regulatory and audit requirements.

Key capabilities

-  Centralized client data repository aligned with Saudi regulatory requirements
-  Automated data collection and verification
-  Configurable client data fields
-  Integrated compliance monitoring
-  Audit support and traceability
-  Integration with BlackRock, Client Portal & App, and Mubasher
-  Real-time data access with record alerts

Platform Benefits

Seamless and compliant onboarding

Embedded AML, tax, and suitability controls

Real time investor visibility and engagement

Digital liquidity for private and closed end funds

Secure cash management with controlled fund movement

Reduced manual intervention through automation and integrations

Regulatory aligned, scalable architecture

Structured approval workflows with full audit trails

InvestSphere

enables asset management and wealth management companies to operate as fully digital, client centric, and compliance ready institutions, built for **operational efficiency and investor trust**.

FundLink

A universal fund distribution management platform.

A secure, API-based middleware solution enabling asset management companies to extend their fund offerings to external fintech distribution partners.

It supports multi-tenant partner management, automated order processing, and real-time visibility while maintaining strong security and compliance controls.

Key capabilities

Integrations with TradeX, APX, DirectFN

Partner onboarding and management

Fund and product configuration

End-to-end and bulk order processing with validation

Multi-tenant architecture for core systems and distribution partners

Real-time dashboards, reporting, and analytics

Secure API integration with zero-trust and OAuth 2.0 controls

Enables AUM growth by expanding distribution reach through trusted partners

Cash blocking, settlement, and revenue share management

DocuNet

A document management system for complete operational control

DocuNet centralizes critical documents into a secure and auditable environment, reducing manual processing and operational risk.

- From controlled uploads to approvals and e-signatures, **every document is traceable, versioned, and protected**, strengthening governance while accelerating workflows.

Key capabilities

-  Centralized document repository with version control
-  Automated workflows, approvals, and e-signatures
-  Role-based access with full audit trails
-  Document classification and metadata tagging
-  Regulatory-ready document retention and archival policies

Services

Services that **support financial institutions** across the full lifecycle of digital solutions, from planning and development to deployment and ongoing support.

Professional
Services

Managed
Services

Build-Operate-
Transfer (BOT)

Advisory, Training,
Consultancy & Support

Skill-Based
Resource Outsourcing

01. Professional Services

End-to-end design, development, and deployment of tailored digital solutions, ensuring alignment with business objectives, industry standards, and quality assurance at every stage.

Key capabilities

-  Full lifecycle project execution from concept to delivery
-  Solutions designed to be robust, scalable, and impactful
-  Translating strategy into actionable, technology-driven outcomes

02. Managed Services

Ongoing management of IT infrastructure, enterprise platforms, and mission-critical systems to deliver reliability, security, and performance.

Key capabilities

-  Allows clients to focus on core operations
-  Reduces operational risk and downtime
-  Ensures smooth, efficient technology operations

03. Skill-Based Resource Outsourcing

On-demand access to highly skilled professionals who integrate seamlessly with client teams to accelerate execution and innovation.

Key capabilities

-  Flexible, project-based talent deployment
-  Embedded knowledge transfer for continuity
-  Enhanced collaboration and execution speed

04. Advisory, Training, Consultancy & Support

Expert guidance and enablement services designed to maximize solution adoption and organizational readiness.

Key capabilities

-  Strategic consulting to align technology with business goals
-  Hands-on platform training for teams
-  24/7 technical support and troubleshooting
-  Organizational enablement for confident AI adoption

05. Build-Operate-Transfer (BOT)

A flexible engagement model where DigiTrends designs, builds, and operates technology solutions before transferring full ownership to the client.

Key capabilities

-  Ensures systems are stable, secure, and optimized
-  Reduces implementation risk for clients
-  Enables long-term success with expert-led guidance during early stages

Case Studies

Real-world implementations showing how **DigiTrends** helps financial institutions simplify processes, stay aligned with regulations, and create smoother digital experiences for investors.

**Digital Transformation
of a Leading Asset
Management Firm**

**Revolutionizing Investor
Engagement and Investment
Management**

Case Study

Digital Transformation of a Leading Asset Management Firm

Location: **Riyadh, KSA**

The asset management firm was facing delays from manual processes, increasingly complex regulatory requirements, fragmented systems, and challenges in delivering a consistent investor experience. DigiTrends addressed these challenges through a connected digital platform that streamlined onboarding, compliance, communication, and investment management.

Background:

01

Manual processes hindered operational agility, causing delays and errors

02

Adhering to evolving regulations proved to be a complex and time-consuming endeavor

03

Providing personalized experiences and transparent communication was a struggle

04

Disparate systems created hurdles in communication and data flow

Solution

01

Deployed intuitive and automated systems to replace cumbersome manual processes, ensuring streamlined operations and minimizing errors

02

Integrated comprehensive compliance solutions, offering real-time alerts, automated reporting, and seamless adherence to both local and global regulations

03

Developed personalized portals and transparent communication channels, enhancing client engagement and fostering trust and transparency

Outcome

01

Manual processes were replaced with streamlined, automated solutions, reducing errors and accelerating operations

02

Compliance became a seamless process, with real-time alerts, automated reporting, and integrated systems

03

Their client experience was revolutionized with personalized portals, transparent communication, and holistic investment overview

04

Solutions were integrated seamlessly, fostering efficient communication and data flow

05

Account opening and KYC moved fully online, removing friction and making onboarding faster, simpler, and more secure

06

Clients got access to personalized investor dashboards, offering clear portfolio visibility and effortless tracking at any time

Case Study

Revolutionizing Investor Engagement and Investment Management

Location: **Riyadh, KSA**

A leading investment management firm approached DigiTrends to develop a cutting-edge digital platform aimed at enhancing investor engagement and streamlining investment management. This all-in-one platform is designed to provide clients with seamless access to investment opportunities, real-time portfolio tracking, and secure transactions, while adhering to strict regulatory compliance.

Background:

- 01 Manual onboarding processes caused delays, errors, and client dissatisfaction
- 02 Clients used multiple platforms, complicating portfolio tracking and transactions
- 03 Growing security and compliance concerns with increasing digital transactions
- 04 Limited communication channels made it difficult to provide timely updates and relevant investment opportunities

Case Study

Solution

01

Developed a digital platform with a Client Portal (iOS/Android) and web portal for seamless multi-channel access to manage investments

02

Integrated automated KYC and onboarding with services like AI-Elm and Nafath for secure identity verification

03

Provided real-time access to investment opportunities, portfolio tracking, and transaction history to boost client engagement

04

Ensured secure transactions with multi-layer authentication, role-based access control, and end-to-end encryption for data privacy and compliance

05

Added a client communication system with personalized notifications, secure messaging, and mass communication for timely updates and alerts

06

Included regulatory compliance features such as FATCA integration, tax transparency, and periodic KYC updates to meet local and international regulations

Outcome

01 Reduced onboarding time through automated KYC updates and seamless identity verification for new and existing clients

01

02 Increased client engagement with real-time portfolio tracking, investment insights, and easy access to opportunities, resulting in a more active user base

02

03 Enhanced security with multi-layer authentication, ensuring all client data and transactions are fully protected

03

04 Streamlined operations via automated onboarding, risk assessments, and data management, reducing manual work and increasing efficiency

04

05 Ensured compliance with local and international financial regulations and mitigating the risk of non-compliance

05

06 Improved operational efficiency by reducing client inquiries and support needs through self-service features of the platform

06
